

# Discover BION's Biogas Purification Solutions

## Deliver a Clean Biogas at the Lowest Operating Cost

- ✓ Reduce carbon change-out frequency
- ✓ No exothermic effect (doesn't overheat)
- ✓ Protect membranes and other equipment
- ✓ Excellent absorption capacity in lower relative humidities

## Bion's Biogas Purification Solutions

## Biogas Pretreatment

- BION's molecular media carbon absorber is manufactured in our headquarters in Europe and eliminates 99.5% of gases
- High Performance Solutions with a wider range of media and large surface areas, active ingredients and catalysts specialized in gas removal

## Advice & Support

- In-house media prescription software with optimization capability
- Customized media prescription according to the needs of each Biogas plant
- BION's Media Carbon Absorber operates under optimal plant conditions, maximizing its efficiency

## Verification

- Post-sales technical support in-house gas phase specialized laboratory and a continuous evaluation and follow-up of gas analysis
- Media life calculation on a customized basis

## A Clean Biogas with BION Media Carbon Absorbers

### Bion's Biogas Purification Solutions

At BION we are proud to contribute to the generation of renewable gas and we provide customized solutions to each plant by carefully choosing the right combination of absorbers - from virgin activated carbon, impregnated carbons to catalytic media – for optimal removal efficiency in each case.

These proprietary absorbers excel at eliminating all gases, boasting an impressive adsorption capacity and efficiency that not only ensures optimal performance but also significantly slashes your operational expenses (OPEX).

**Contact our experts to find the best biogas purification solutions for your business!**
